

PROPOSAL

**ENHANCING OUTPATIENT CARE AT
ETHIE HAWORTH CHILDREN'S
CANCER CENTER**

Pediatric Hematology/Oncology and Infusion Clinic

Overview and Highlights

When designing the new outpatient clinic, we considered every need of our patients and families. Our time on the 10th floor of Helen DeVos Children's Hospital has proven we have the right people to care for our patients, and we are excited to expand our capabilities and potential in this new space. Highlights include:

Special Touches for our AYA Patients

Our AYA team has been brainstorming around how we can be intentional about making these patients feel comfortable and welcome. Ideas include having bed extenders available if needed; an exam bed designed for oncofertility needs; making a music streaming service such as Spotify available; and having chargers available for a variety of devices.

Group Infusion Spaces

Our AYA patients often prefer to be more social during their treatment, and the new clinic will have plenty of space for patients to be together and build relationships with those who are going through something similar.

Private Infusion Rooms

There will be five private infusion rooms located within the suite, in which patients will be able to choose the color of the lights above their bed.

Nourishment Area

The time a patient spends in the infusion area can be long. Having a nourishment area near the infusion space will ensure that patients and families have access to nutrition throughout their visit.

Interactive Experiences

One of the programs we are vetting is CreatureVerse, which engages patients in creating customizable interactive experiences in a virtual environment. Patients can select from a range of creatures and characters and have multiple options for the texture and colors of their creature as shown in the picture below.
